Trees and Graphs

(For the below tasks, you may want to create a binary tree manually and use the same tree for all of these tasks. However, for task 6, you need two trees; hence, prepare another)

NB: All the methods(1-7) as well as the main method/tester statements must be written in one class. DO NOT write a different class for each method.

Compile all your codes and simulation picture in ONE PDF and submit it.

- 1. **RECURSIVELY** calculate the height of a tree.
- 2. **RECURSIVELY** calculate the level of a Node in a tree.
- 3. Print elements of all the Nodes of a tree using **Pre-order Traversal**.
- 4. Print elements of all the Nodes of a tree using **In-order Traversal**.
- 5. Print elements of all the Nodes of a tree using **Post-order Traversal**.
- 6. Write a method which will evaluate whether two trees are **exactly same** or **not**.
- 7. Write a method which will return a **copy** (**new tree**) **of a given tree**.

8. An adjacency matrix is given below:

	A	В	C	D	E	F	G
A	0	1	0	1	1	0	0
В	0	0	0	0	0	0	1
C	0	1	0	0	0	0	0
D	0	0	1	0	0	0	1
E	0	0	0	0	0	0	0
F	0	0	0	1	0	0	0
G	0	0	0	0	1	1	0

a) Draw the equivalent graph.
